You will be able to add the profile by clicking add device, then selecting Use configuration from a profile. Please see the screenshot below.

The screenshot shows the Netbiter management interface. At the top, there are tabs for 'Presentation' and 'Management'. Below that, there's a 'Debug' section and a 'Status' section with 'Configuration' selected. The main area shows a table with columns for 'Device', 'Device type', 'Settings', 'Template', and 'Action'. The table contains two rows: 'Netbiter EasyConnect EC300 serie' and 'GPS'. A modal dialog titled 'Add device' is open in the center. It has three radio buttons: '1/3 Set device type', 'Use configuration from a template', and 'Use configuration from a profile'. The 'Use configuration from a profile' option is selected and highlighted in yellow. Below the radio buttons, there are two dropdown menus: 'Device type' set to 'Modbus' and 'Device profile' set to 'GSC400 Netbiter Profile'. In the background, the 'add device' button in the table is circled in red. At the bottom, there's a 'Server side alarm configuration' section with 'Offline alarms' set to 'No' and 'Alarm forwarding behavior' set to 'Use Account settings'.

Click the “Synchronize configuration” button after adding the profile.
